

AN INSTITUTION'S LAUNCH PATH

Your institution. Your clients. Connected.

Turn a defined financial service into a branded experience, with clear responsibilities and a practical route to activation.

English · Product & implementation briefing

ILLUSTRATIVE LAUNCH BRIEF

A first client service

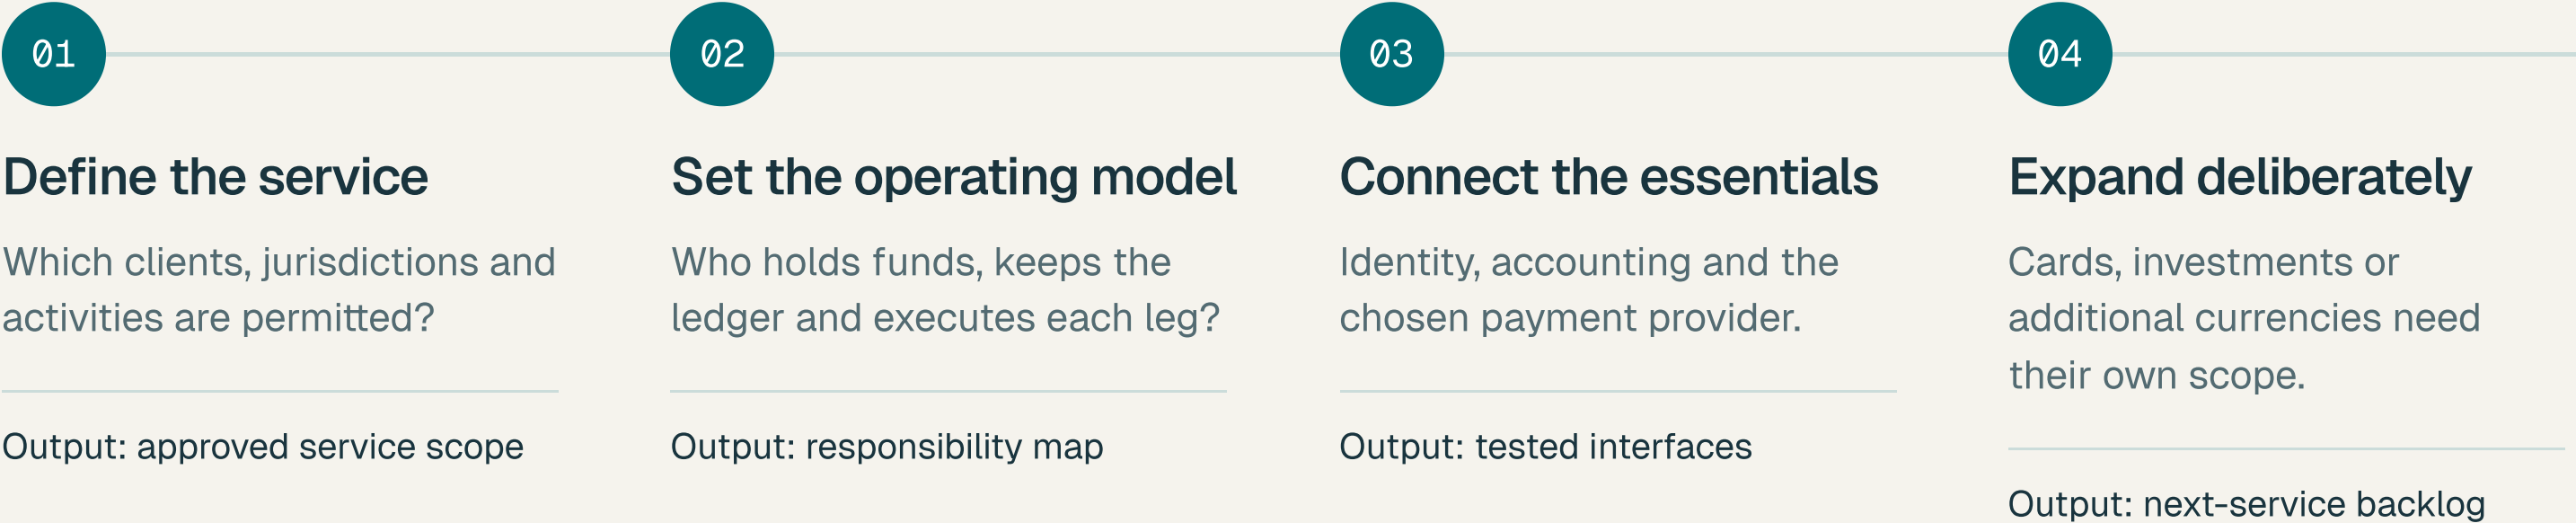

Client need	Account access + payments
Experience	Your branded Banking instance
Delivery	OVRYDE + institution team
Activation	Agreed providers and acceptance

One scoped launch → room to expand

ILLUSTRATIVE INSTITUTION • NOT A CUSTOMER CLAIM

Start with a client need you can serve.

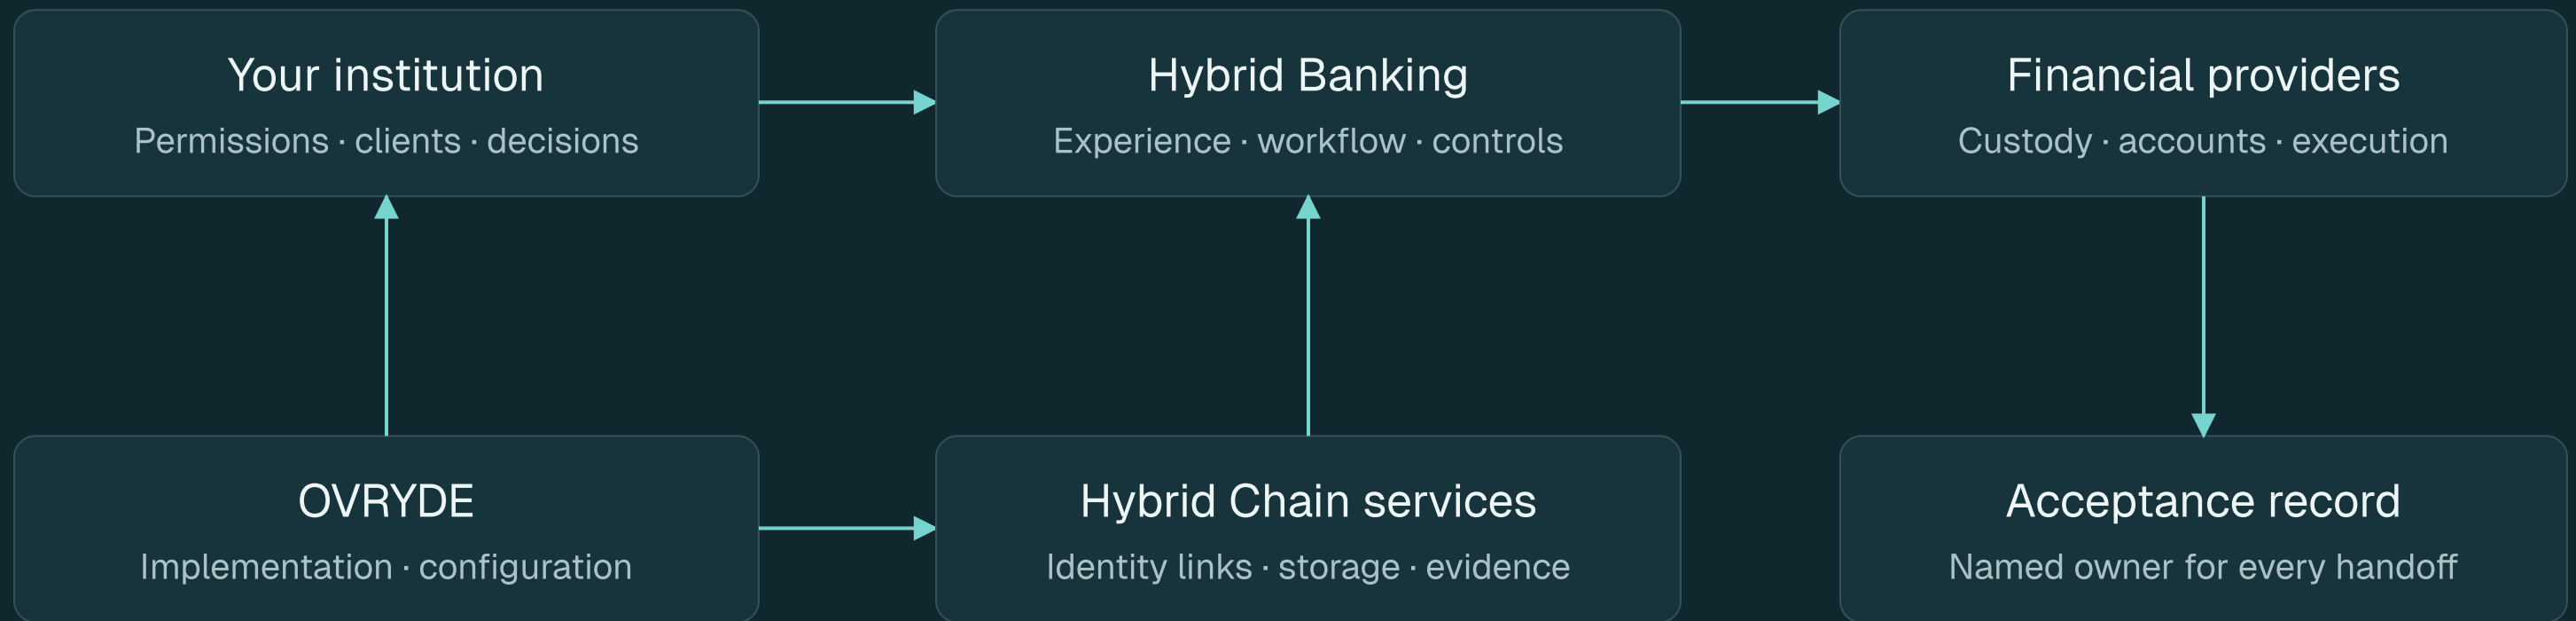

A financial institution wants clients to view balances, add recipients and request payments.

WHO DOES WHAT

One experience. Named responsibilities.

A coherent client journey depends on explicit ownership at every service boundary.

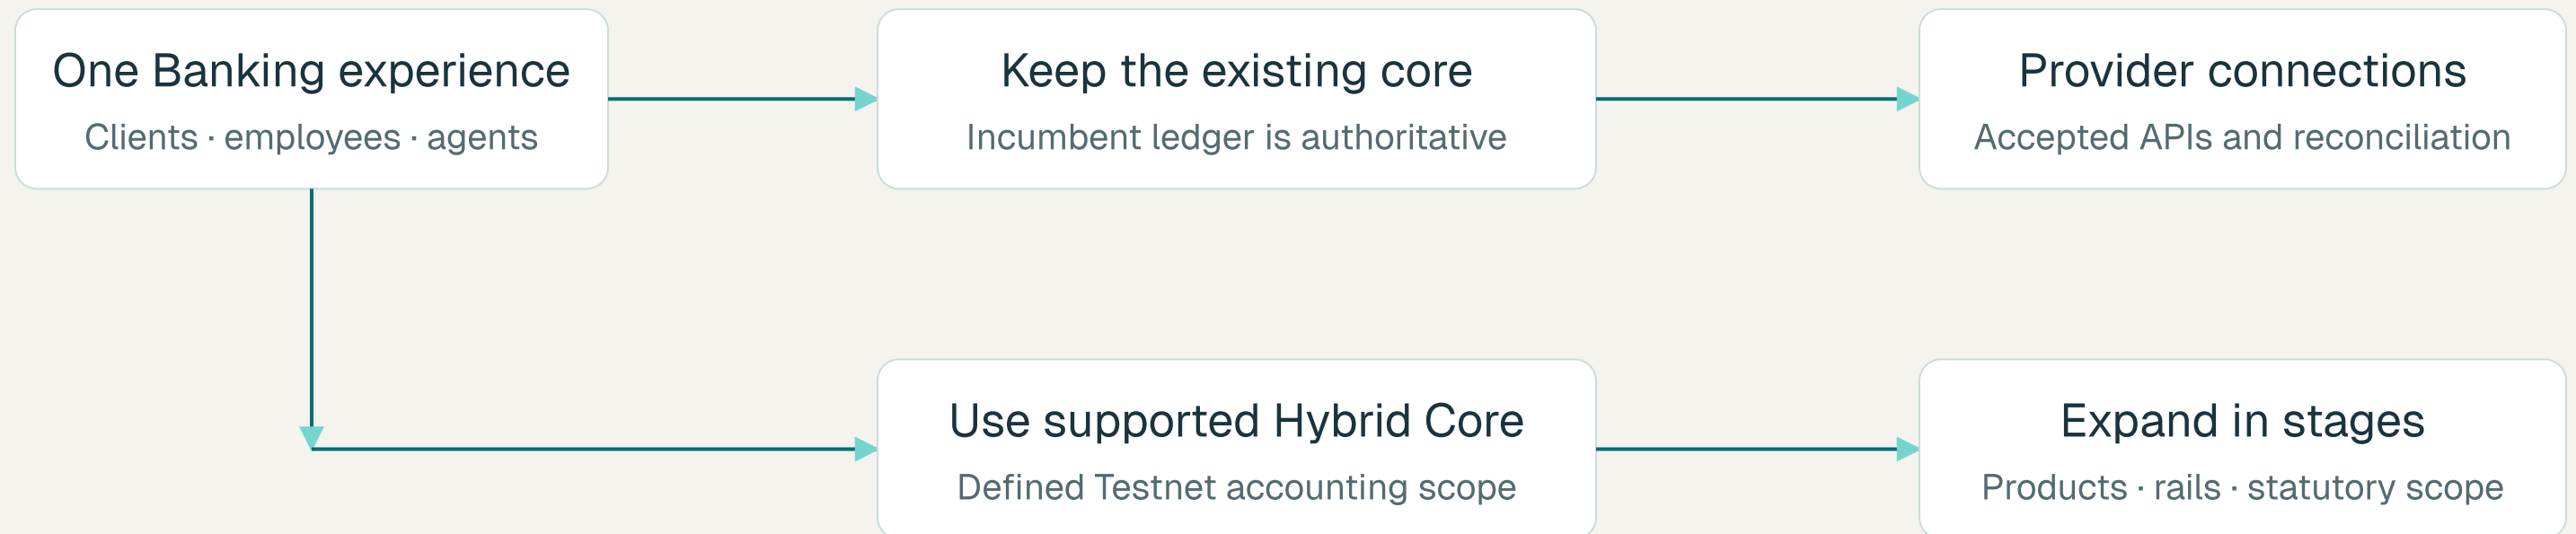

Ecosystem access Membership connects participants; it does not transfer licences or activate financial services.

TWO OPERATING MODELS

Decide where accounting authority lives.

Preserve an existing core or evaluate Hybrid Core's supported scope for a defined Testnet pilot.

Choose one accounting authority for each product and balance.

CLIENT → INSTITUTION → PROVIDER

Walk through the first service together.

Illustrative EUR 250 payment journey. External execution and provider reconciliation require integration.

Client

Review EUR 250
Recipient, source account, terms and fees.

Confirm the instruction
A client action is distinct from agent preparation.

Bank team

Apply current controls
Eligibility, screening and required approvals.

Release under authority
No assumption that a saved recipient is still eligible.

Provider

Accept or reject execution
A separately integrated financial connection.

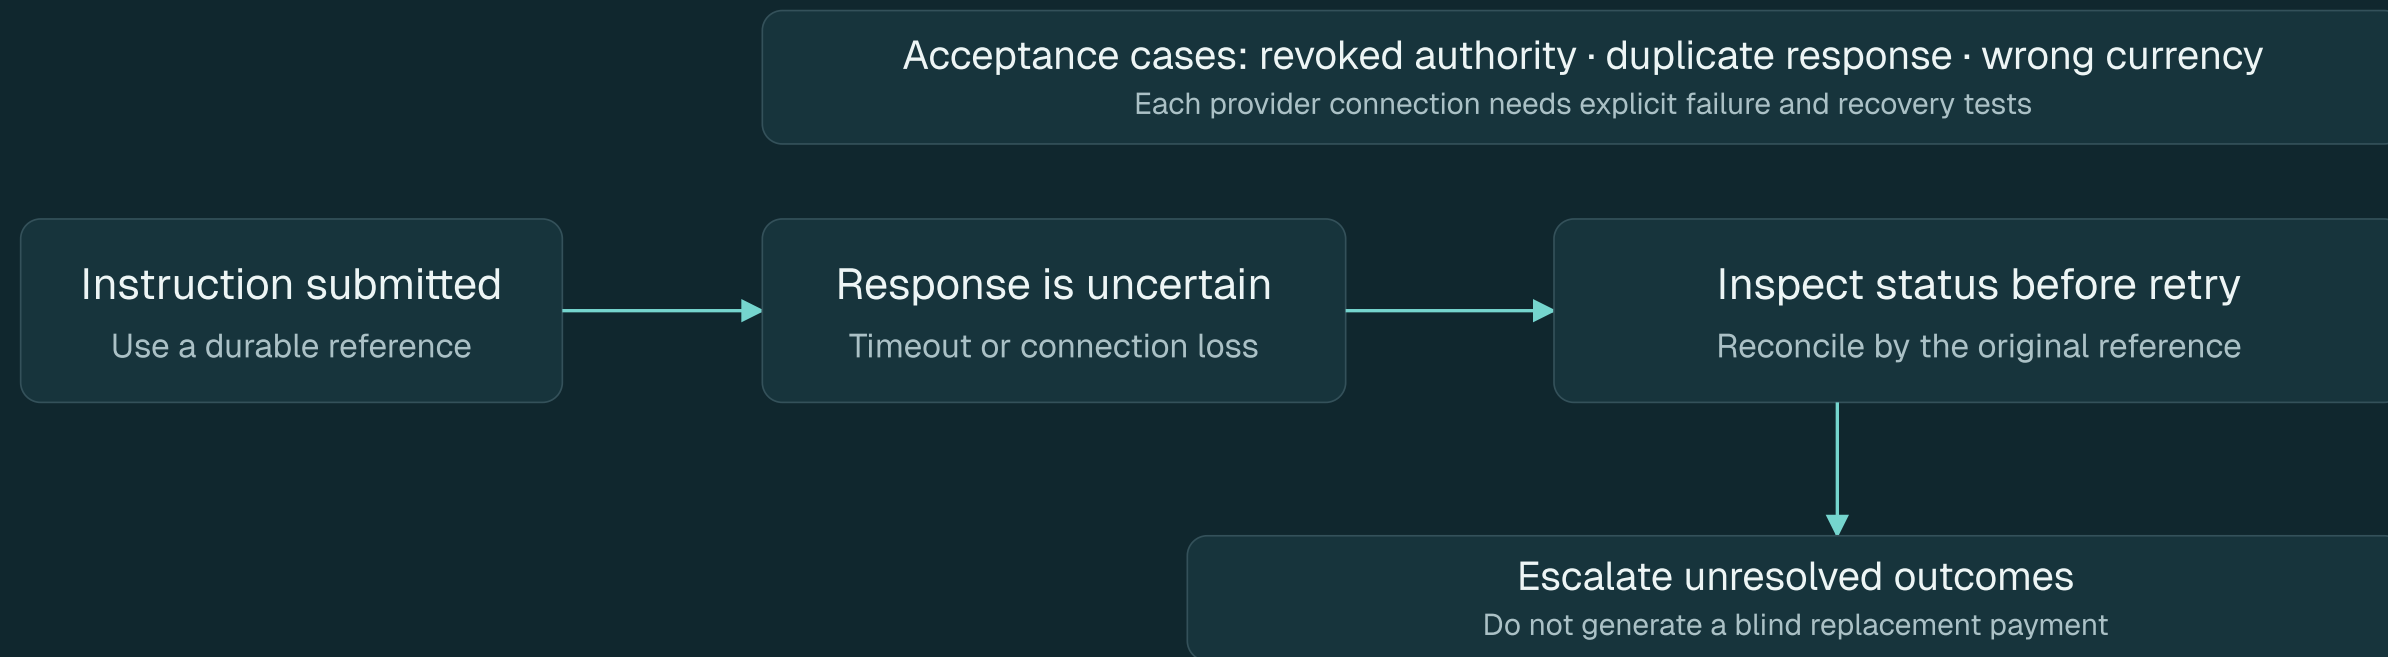

Return status and references
Reconcile the result before calling it settled.

ACCEPTANCE DESIGN

Test the moments that create real risk.

A successful API response is only one part of an institution-ready integration.

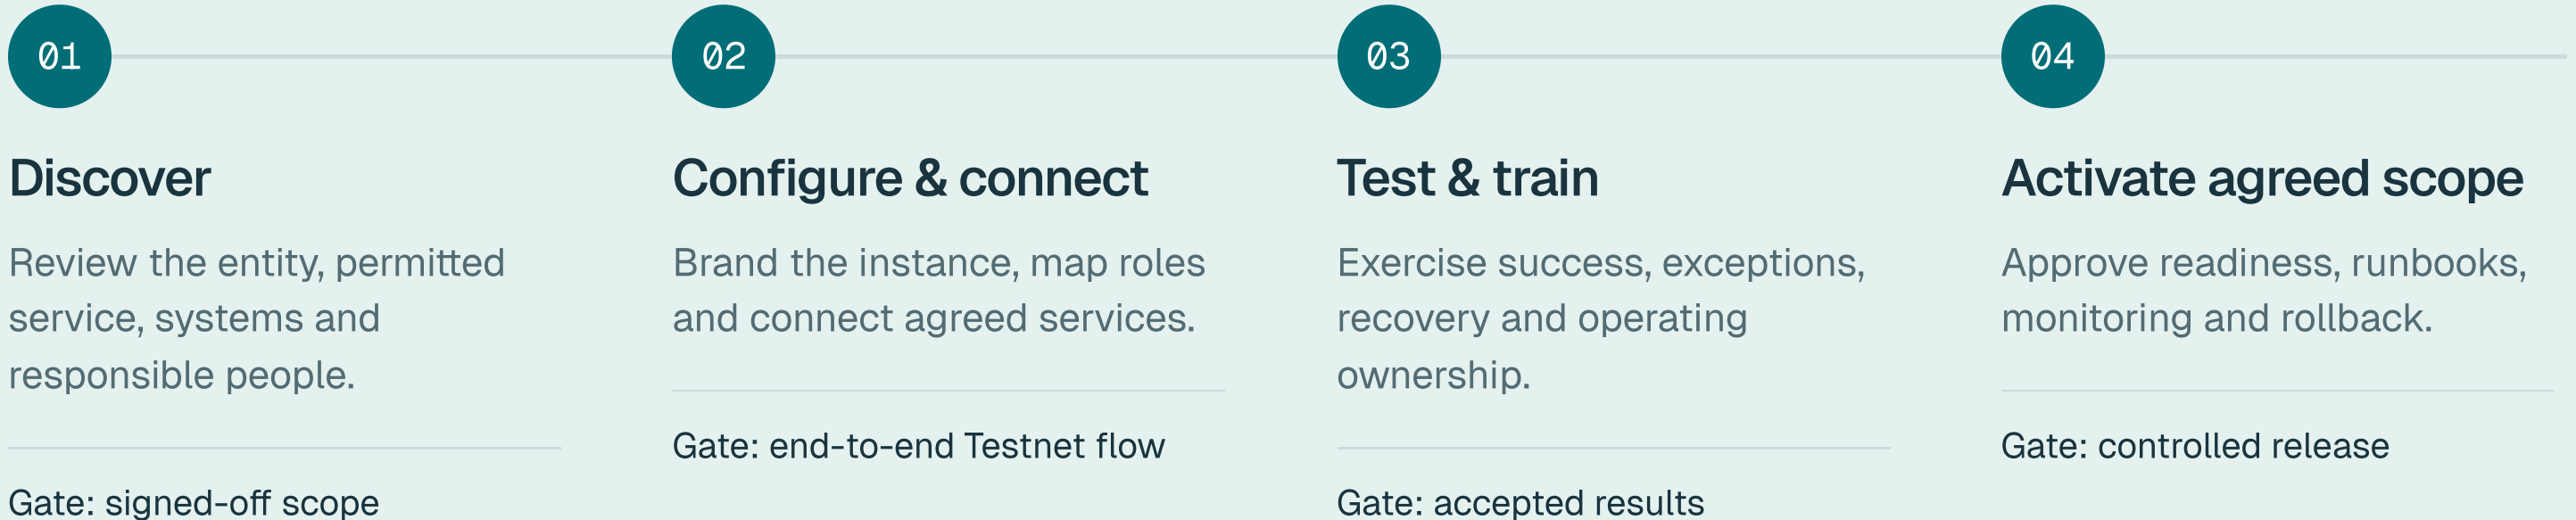

Planned acceptance These are requirements for the agreed provider adapter; they are not a claim that every rail is connected.

DELIVERY WITH OVRYDE

Four gates from scope to activation.

Progress is demonstrated through working journeys and reviewed evidence, not a generic installation date.

Dependencies Provider access, institutional decisions and regulatory scope determine the activation path.

A CONCRETE NEXT STEP

Bring a launch brief, leave with a plan.

Turn your first service into a reviewable implementation scope.

BRING TO THE DISCUSSION

Your starting point

Authority	Entity + permitted activities
First service	Client group + core journey
Systems	Existing core + providers

DEFINE TOGETHER

Your delivery plan

Boundary	Working capability vs new work
Acceptance	Success + failure + recovery
Delivery	Owners + milestones + scope
