EQUITY LAUNCHPAD / AN ISSUER BRIEFING

Know your shareholders. Preserve their rights.

A controlled path from company evidence and primary funding to ownership, shareholder servicing and a separate market handoff.

Explore the product through a fictional company

01 / START WITH ENFORCEABLE RIGHTS

Define what the investor owns.

Token design follows the legal structure, share rights and recognized register.

01

Issuer-sponsored shares

Direct rights in the company, under the accepted class documents and recognized register.

02

SPV equity

Rights in the holding vehicle. Underlying-company exposure and pass-through obligations depend on its documents.

03

Custodian-backed claim

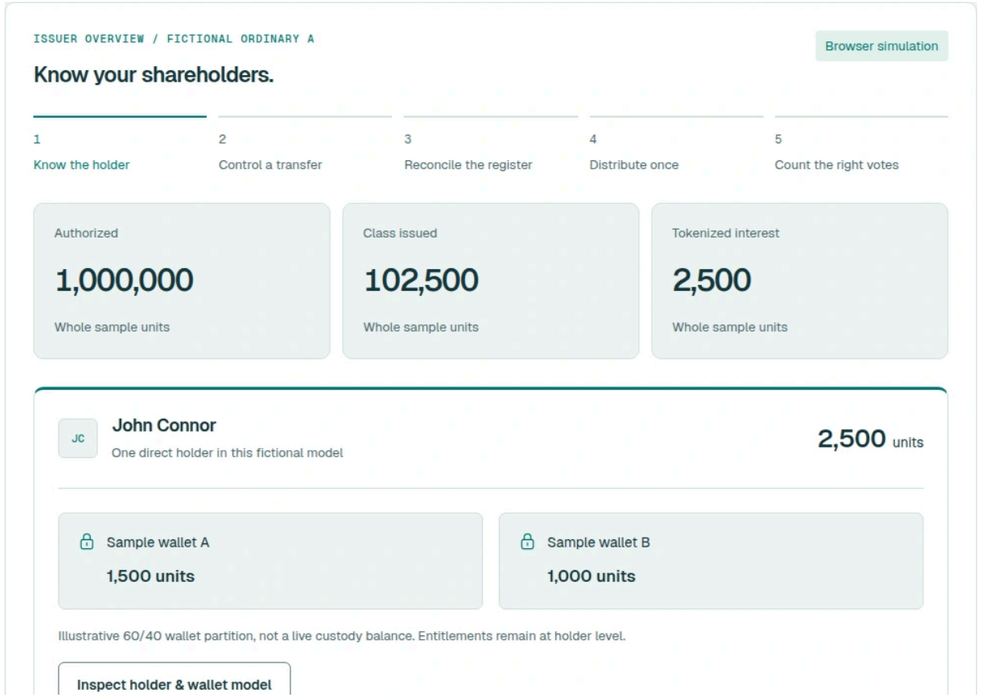

A contractual custody claim. Backing, insolvency, look-through and voting responsibilities must be explicit.

Before a real offering: confirm the issuer, jurisdiction, register authority, transfer rules, dilution and exit terms. Hybrid ID verifies identity or representation; it does not establish legal title by itself.

02 / ACTUAL SIMULATOR EXCERPT

Two wallets. One shareholder entitlement.

A wallet is a destination. The holder record determines the entitlement.

ACTUAL BROWSER SIMULATOR · SYNTHETIC RECORDS · NO LIVE IDENTITY OR CUSTODY

2,500 units total

1,500 in sample wallet A and 1,000 in B are a partition of the same holding.

Rights counted once

Dividends and voting use the holder snapshot. A second wallet adds no rights.

03 / TRANSFER & RECONCILIATION CONTROLS

A blocked request moves no shares.

Eligibility and instrument restrictions must pass before an independently reviewed transfer.

TRANSFER REQUEST / HB-TRANSFER-DEMO-001

100 units requested

The recipient has no current eligibility record. The request is held; John Connor keeps all 2,500 units.

Held → resolve eligibility and restrictions → review exact terms

REGISTER RECONCILIATION / SAMPLE

102,500 vs 102,501

A one-unit discrepancy holds new transfers, distributions and market admission. Reconcile the source observation; do not edit holdings to force a match.

Mismatch → approved source reconciliation → controls resume

04 / DISTRIBUTION & VOTING SNAPSHOTS

Service the holder, not each address.

The same fictional allocation drives both controls; each action has its own authority and record.

ONE DISTRIBUTION / TWO WALLETS

270.00 USD1 net

2,500 units × 0.12 = 300.00 gross. Illustrative withholding: 30.00, reserved rather than remitted. No applicable tax rate is implied.

Exact snapshot → independent approval → separate funding → one payout

ONE BALLOT / FULL CLASS

2,500 / 102,500 votes

The denominator includes 100,000 pre-existing units. Only John Connor votes in this case. Two wallets do not duplicate his ballot.

50% quorum required → no quorum → no approved resolution

05 / THE ECOSYSTEM BEHIND THE CONTROLS

One experience. Distinct authorities.

Identity, evidence and execution each have a clear owner. A commitment alone is not truth, ZK or finality.

BANKING EXPERIENCE / LAUNCHPAD WORKFLOW

Connect the full issuer journey.

Banking presents the experience. The dedicated Launchpad service owns offering, diligence, disclosure, subscription and admission workflow.

- Exact versions and attributed decisions
- Private evidence and controlled disclosure
- Minimized commitments with explicit proof status

Hybrid ID

Accountable identity, company representation, current workspace authority.

Data Vault

Protected files, exact-byte versions, current access and storage evidence.

Core / Chain

Canonical assets, funds, holdings and purpose-specific financial receipts.

Exchange

Separate admission, liquidity, order execution and settlement acceptance.

06 / FROM DEMONSTRATION TO ACCEPTED TESTNET

Commission one genuine case.

The source contracts provide foundations. Banking-specific joined acceptance remains required.

01 / AGREE THE OFFERING

Make authority explicit.

Real issuer and jurisdiction. Class rights, recognized register and registrar responsibilities. Eligible investors and independent reviewers.

02 / CONNECT THE RECORDS

Use canonical services.

Current Identity authority, exact Vault evidence and one settlement asset. Core funding, reservation, allocation, refund and servicing receipts.

03 / VERIFY THE LIFECYCLE

Accept before activation.

Failures, retries, revocation, correction and reconciliation. Suspended market admission is separate from controlled trading activation.

StatForce assessment is deferred pending its agreed contract. No private-equity venue or Perpetuals route is commissioned by the simulator.

YOUR NEXT STEP

Explore the controls.
Bring your first case.

Identity linked.
Rights preserved.
Decisions accountable.

AVAILABLE NOW / BROWSER DEMONSTRATION

A resettable, inspectable example.

One company, four perspectives, nine scenarios and a five-control issuer walkthrough. Fictional records; no monetary value.

Real issuance, custody, distributions and trading need accepted integrations. No guaranteed liquidity, redemption on demand or universal regulatory coverage.
