ENTERPRISE PAYROLL AND MASS PAYMENTS

Pay people.
Keep control.

Connect your existing payroll to USD1 wallet and fiat delivery, with the controls enterprise teams expect.

HR PREPARATION / FINANCE APPROVAL / INDIVIDUAL RECEIPTS

THE OPERATING MODEL

Keep your payroll expertise. Connect the delivery.

A new payment experience should fit your existing employer systems and responsibilities.

YOUR EXISTING HRIS / PAYROLL

Calculate & approve

Gross-to-net pay, deductions, statutory reporting and payslips.

→

HYBRID BANKING

Prepare & authorize

Employee elections, delivery readiness, exact terms and independent review.

→

HYBRID CORE / PROVIDERS

Execute & reconcile

Asset funding, recipient outcomes and accounting-ready references.

Define the HRIS import, payout routes and employer policy around your chosen systems. This demonstration contacts no HRIS and sends no wages.

USD1: BitGo is the issuer and initial purchase/redemption processor; World Liberty Financial owns the brand and provides certain services.

THE TEAM HANDOFF

Three teams. One original run.

HR

Prepare the version

Inspect recipients, consent and destinations. Resolve the exceptions before sending to finance.

SUBMIT FOR REVIEW

FINANCE

Authorize the terms

Review separate funding assets, the quote and fees. A different authorized person approves.

APPROVE EXACT VERSION

OPERATIONS

Follow every outcome

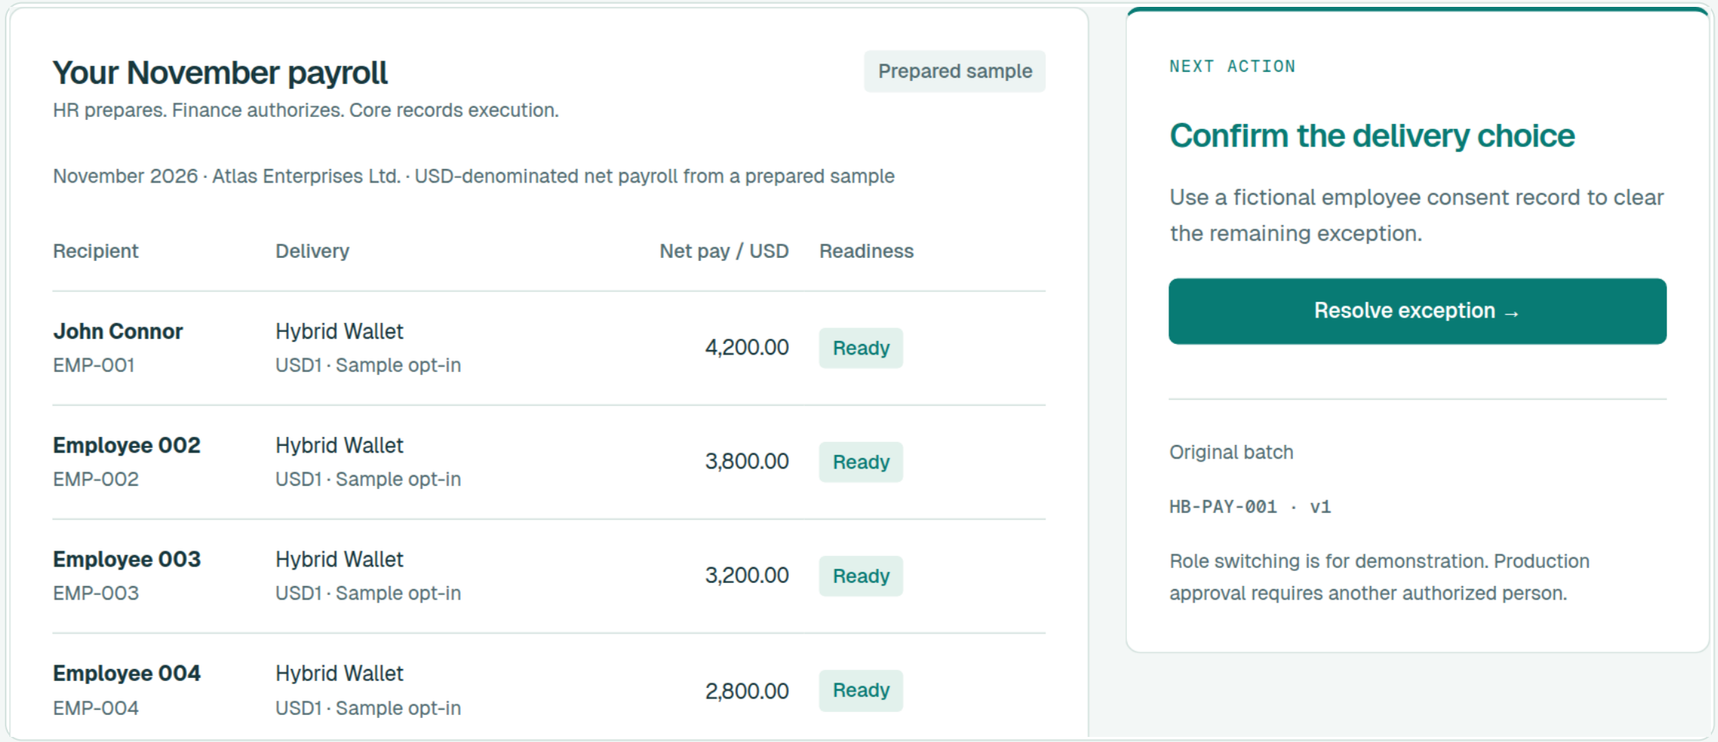

Track each original operation. Reconcile partial results and uncertainty before closing the run.

INSPECT & RECONCILE

A changed instruction invalidates the previous approval. An expired approval cannot authorize a new payout.

INSIDE THE HR WORKSPACE

Resolve the exception before payday.

ACTUAL SIMULATOR EXCERPT / ATLAS ENTERPRISES LTD. / FICTIONAL RECORDS

01 / INSPECT

See each recipient’s delivery choice and readiness.

02 / RESOLVE

Clear the missing consent. Send only a complete version to finance.

FINANCE / FUNDING AND AUTHORIZATION

Review the assets. Approve the instruction.

WALLET DELIVERY

14,000.00 USD1

Four opted-in sample recipients

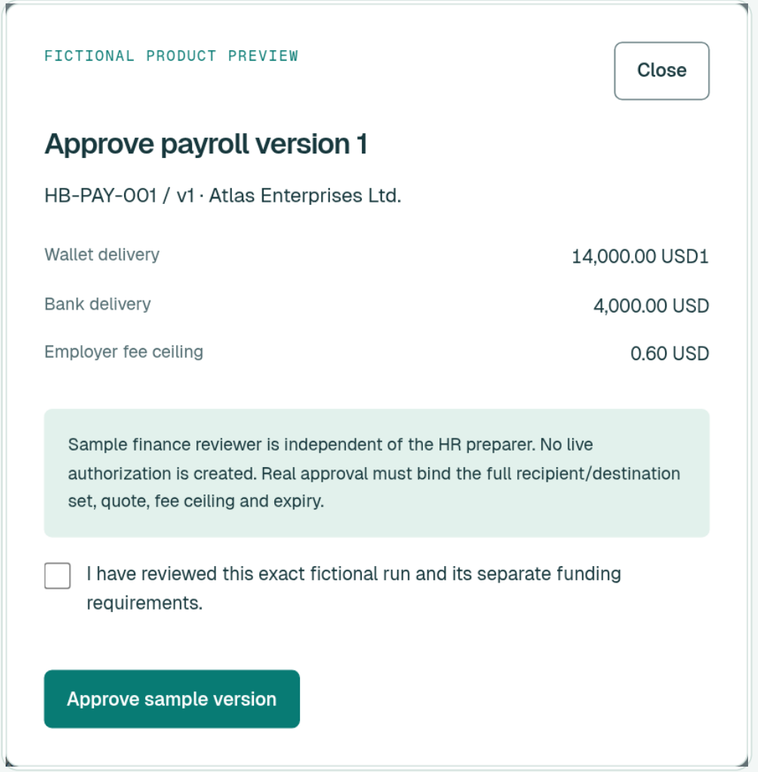

BANK DELIVERY

4,000.60 USD

4,000.00 net pay + 0.60 sample fees

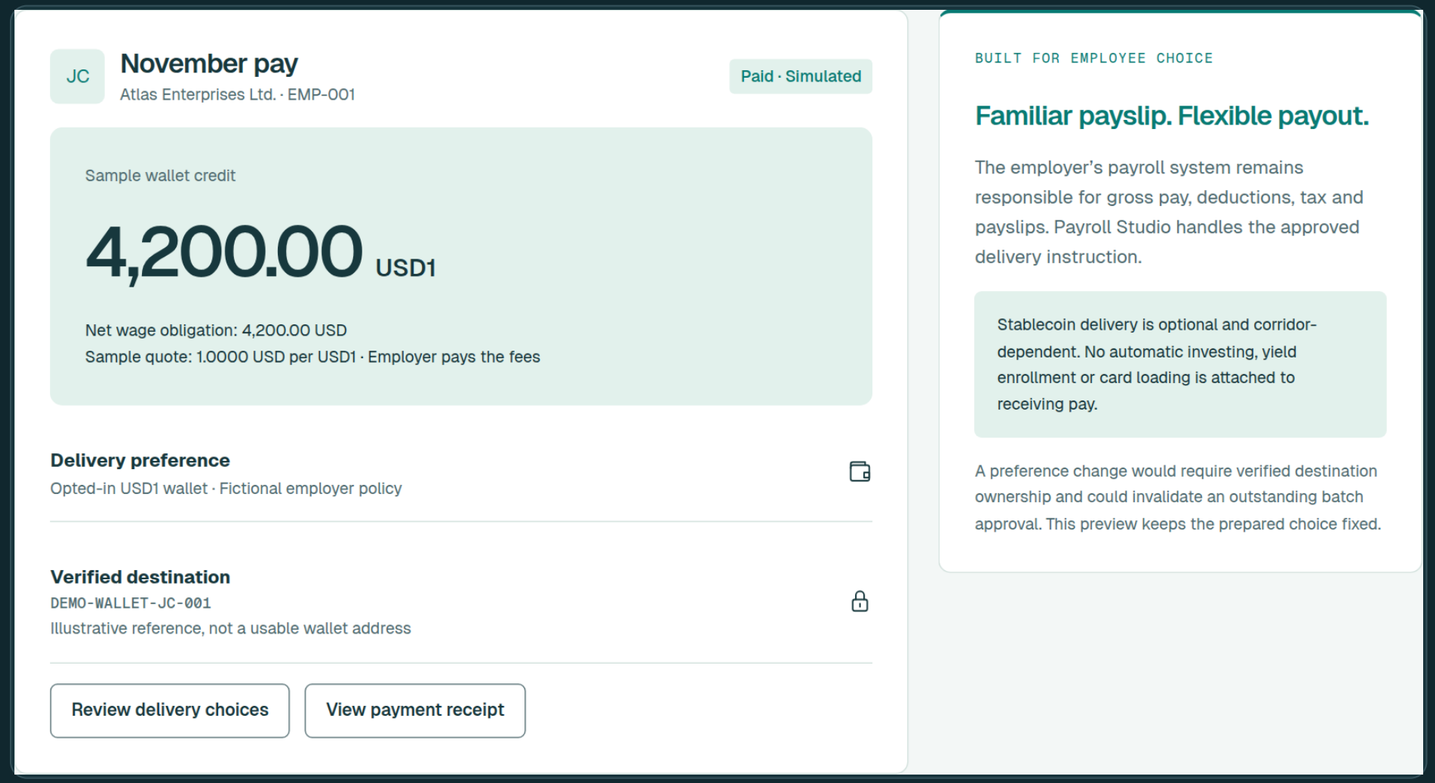

USD and USD1 stay separate. Any conversion needs its own executable quote, spread, expiry and funding approval.

Illustrative 1.0000 USD/USD1 basis. Sample service fee: 0.10 USD per successful recipient. External rail, conversion and gas costs require quotes; no tariff is approved here.

EMPLOYEE SELF-SERVICE

Your pay should be easy to understand.

Only your payment.

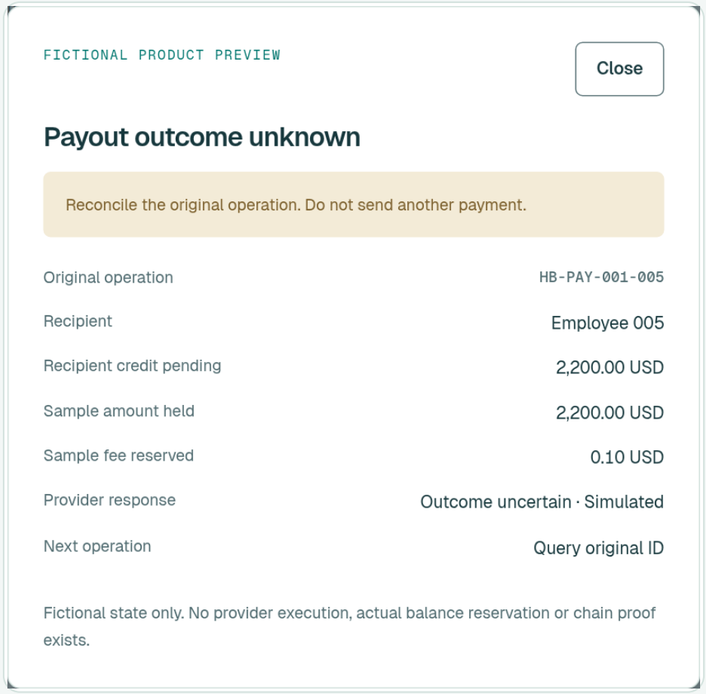

Your delivery election, verified destination and original receipt belong together.

Card loading and investment choices are separate actions. Receiving pay never automatically enrolls you in yield.

US pilot planning requires federal/state wage-payment review. Employee consent alone is not clearance for direct stablecoin wages.

PAYOUT OPERATIONS / A REALISTIC EXCEPTION

Uncertainty must not become a second payment.

SAMPLE RESERVATION

2,200.00 USD

Keep the amount held while the original outcome is unknown.

0.10 USD sample fee remains reserved until successful reconciliation.

ORIGINAL OPERATION

HB-PAY-001-005

5 paid. 1 uncertain.

Reopen the case without losing its reference. Payroll and accounting receive one reconciled result per recipient.

THE HYBRID FOUNDATION

One experience. Defined service boundaries.

HRIS / PAYROLL

Approved net-pay source

→

HYBRID BANKING

Workflow and exact reviews

→

HYBRID CORE

Balances, holds and execution

→

PAYOUT ROUTES

USD1 wallets / fiat banks

IDENTITY

Hybrid ID

Authoritative mapping, company representation and purpose-bound sharing.

PRIVATE RECORDS

Hybrid Vault

Governed payslips, evidence access, retention and recovery.

SCOPED EVIDENCE

Hybrid Explorer

Permitted receipts and commitments, without a public salary roster.

ENTERPRISE SECURITY / PROTECT THE DATA LIFECYCLE

Quantum secure. Precisely scoped.

Treat payroll confidentiality, key custody and recovery as a scoped security programme with verifiable protection and recovery.

PROTECT	Payroll documents and supported internal communication.
VERIFY	Algorithms, protocol versions, key lifecycle, recovery and deployment evidence.
SEPARATE	External HRIS, wallets and USD1 host-network security have their own boundaries.

QLM

Quantum Language Model

Proposed quantum-enabled LLM assistance, separate from encryption. Model and performance unconfirmed.

Design objective, not a certification. MPC alone does not establish post-quantum security. This browser demo performs no encryption.

FROM PRODUCT DEMONSTRATION TO AN ACCEPTED EMPLOYER PROGRAMME

Start focused.
Build on proven outcomes.

01 / DEFINE

One employer

US market focus. Employer, states, HRIS and worker types to agree.

02 / CONNECT

One route

Authority, Core, Identity, Vault, liquidity and payout adapter.

03 / VERIFY

One complete run

Consent, review, failure, recovery and reconciled receipts.

04 / EXPAND

More useful payments

Contractors, commissions, expenses and suppliers, under their own policies.
